

FIXED WIRELESS

Improve performance with a faster, more reliable connection

Network demands are increasing and continuously evolving, resulting in IT departments that are struggling to support high-demand, high-bandwidth applications that drive 24x7 business operations and productivity.

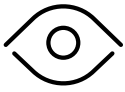

Secure high-bandwidth connectivity and network diversity to eliminate downtime and deliver a better customer experience

Businesses today need network connections that can supplement their existing network to add robustness, scalability, support and redundancy for mission-critical cloud-based, high-bandwidth applications. With Fixed Wireless from Windstream Enterprise, we take the complexity out of network connection management, ensuring downtime and quality are no longer a concern.

Highly secure, reliable diversity to optimize network performance and support critical high-bandwidth apps.

Our fully managed Fixed Wireless service provides secure, high-bandwidth connectivity and network diversity to virtually eliminate downtime. The immediate bandwidth allows businesses to service multiple locations quickly and economically, without the need to dig trenches or lay fiber at each location. A faster and more reliable alternative to capacity-constrained copper access, Fixed Wireless acts as a supplement to fiber which improves overall uptime and availability. This allows businesses to scale existing bandwidth capacity and make their network more robust.

The secure access platform of Fixed Wireless can support the most bandwidth-demanding applications with high availability and virtually no interruptions. When the correct frequency and antenna system are properly engineered, designed and installed, a single wireless access connection provides 99.995% reliability.

Proactive monitoring

Dedicated technicians monitor every connection and treat each alarm with the highest priority

Timely installation

Typically 30–45 days

Faster connection speeds than copper solutions

10 Mbps–5 Gbps

How does Fixed Wireless address your business needs?

Ensure business continuity

Get a guaranteed bit rate over a path-diverse wireless connection with a link that operates continuously, so you have confidence that the backup is operating and available.

Reliable physical diversity

Experience a highly reliable connection method, engineered to rival fiber's exacting reliability standards and provide physical diversity and path redundancy.

Control costs

Eliminate high upfront expenditures for equipment and engineering. Save on installation costs in comparison to dual fiber path solutions and utilize a solution that scales to meet your ever-changing needs.

Reduce management burdens

Let us do all the work. The design, installation and maintenance is managed entirely by Windstream Enterprise with dedicated account management and 24x7 support.

Prioritize mission-critical customer-facing apps

Prioritize business-critical apps to protect customer/user experience in the event of failure of alternate links.

Why Windstream Enterprise?

Expert teams and a comprehensive portfolio of services

Windstream Enterprise has over 70 years of network experience and provides a broad range of access methods, including fiber and copper as well as fixed wireless, which can connect all of our IP and Ethernet services. In addition, we deliver integrated SD-WAN, voice, data and cloud solutions that will position your business for future growth and success.

Customized approach

We take the time to understand your needs and goals and work closely with your IT teams to build, deploy and manage a solution that is tailored specifically to your business.

Unparalleled service and support

Our dedicated teams provide local service and support to help with design and deployment. Plus, our service is backed by our elite level of 24x7 service and support.

About Windstream Enterprise

Windstream Enterprise collaborates with businesses across the U.S. to drive digital transformation by delivering solutions that solve today's most complex networking and communication challenges.
