

Why Managed Security? Why Windstream Enterprise?

Keep critical data and networks safe from cyberthreats

Protect against threats in the virtual world

Network security is a fundamental requirement for all businesses—the growing number and complexity of cyberthreats requires a highly skilled team of security experts, along with a layered defense system.

Improve productivity

Ensure your organization's valuable bandwidth is not compromised by malicious content or unapproved applications and relieve your IT staff from daily security tasks by letting us manage your infrastructure.

Minimize risk

Address your entire threat landscape with our PCI-DSS-compliant Managed Security solution. Stay ahead of the latest threats with comprehensive protection, end-to-end security policies, centralized logging and management.

Reduce costs

Benefit from our unique position as a Communications and Managed Security Service Provider (MSSP), which allows us to combine administration and key network security functions into a single platform.

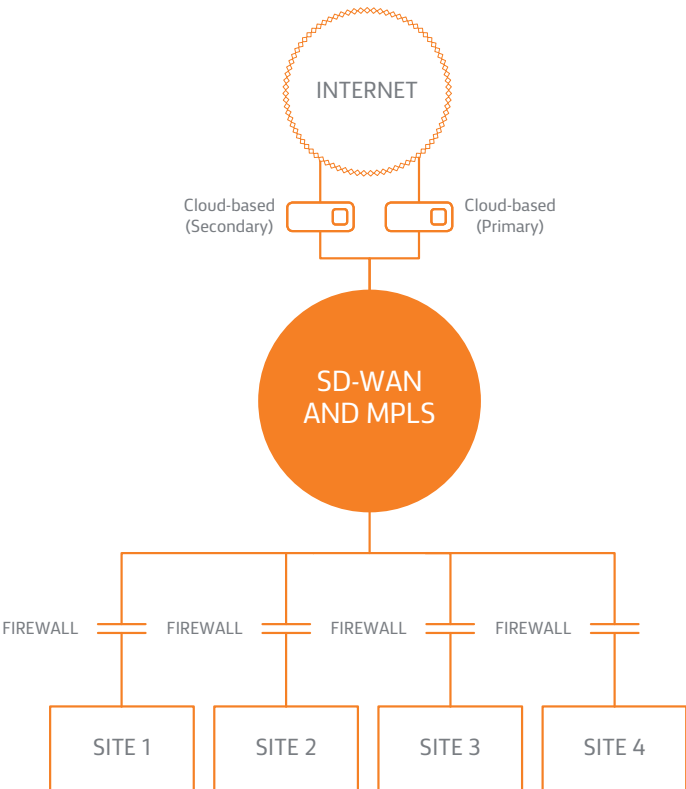

PCI DSS certified

We employ strong security controls and safeguards to protect our network services and customer information from external exploits and continuously verify technologies and security processes through internal and external compliance audits.

Trusted advisors

Our Cyber Security Operations Center (CSOC) provides comprehensive consultation services to help ensure your network is secure.

Ensure network security and business continuity

Scalability

Windstream Enterprise’s cloud-based and premises-based are flexible and scalable to meet your changing business needs.

Redundancy

Managed Security Cloud is protected by a primary and backup firewall, each in a separate city, to assure 100% availability. Failover between primary and backup is near-instantaneous.

Flexibility

Empower your employees with network security that works where they do, in the office, at home, or on the road.

Diversity

By placing our cloud firewalls in geographically diverse locations, ongoing operations are assured even in the case of a major disaster, providing business continuity.

Select a security solution to fit your needs

Managed CPE Firewall

Achieve unmatched performance and protection with a managed, on premises-based firewall—all while simplifying your network. We offer models to satisfy any deployment requirement for enterprises and data centers.

Managed Cloud Firewall

Reduce network vulnerability and free up bandwidth for legitimate traffic. Protect your your entire network from threats at the edge via a geographically diverse and redundant firewall residing in the cloud.

24/7 support

Enjoy direct access to dedicated security professionals who assist with real-time change requests.

Logging and reporting

Review weekly logs and reporting for all solution components, including top users by bandwidth and top destination addresses by bandwidth.

Next-Generation Firewall (NGFW) with Unified Threat Management (UTM) features

Content filtering

Filters web content and controls what users can view/download based on customizable rules and categories.

Application control

Protects desktops and servers by allowing or denying application usage based on pre-defined customized business policies.

Security Information and Event Management (SIEM)

Includes advanced threat detection and incident management, log retention and reporting.

Intrusion prevention

Uses real-time intelligence to proactively detect, prevent and mitigate malicious traffic from accessing your network.

Virtual Private Networking (VPN)

Delivers private network connectivity via encrypted tunnels through the Internet, connecting both remote users and sites to a corporate network.

Our managed connectivity, communications and security solutions are innovative. Your business outcomes are imperative.
