

SIEM

Detect, mitigate and protect against the most sophisticated cyber security threats

Guard your network against malicious attacks that would go undetected with traditional security technologies.

Comprehensive and Efficient

Security Information and Event Management (SIEM) monitors business networks against threats and attempted intrusions, providing necessary reporting and log retention to maintain strict regulatory and compliance provisions.

Why SIEM from Windstream Enterprise?

24x7 threat monitoring and incident management

Firewall logs from our Managed Network Security (MNS) service are analyzed for threats

Customer-owned devices such as active directory and servers are added to enrich correlation and threat detection

Advanced reporting supports compliance requirements

SIEM is included with Windstream Enterprise's MNS premium tier service

Optional support for log retention for up to 7 years

Simplified compliance

Streamlines recurring tasks such as monitoring, reporting and log maintenance.

Data and reporting

Provides weekly summary reports and online access to real-time data.

Comprehensive protection

Offers robust protection against Internet-borne threats (in addition to MNS' proactive capabilities (firewall, intrusion prevention, anti-virus, and application control).

Data theft prevention

Detects anomalous user behavior that can be symptomatic of an exploited account as a precursor to data exfiltration. Revealing such activity empowers avoidance of possible data theft and further system exploitation.
