

**OFFICESUITE HD MEETING® ROOM CONNECTOR**

Meet and collaborate efficiently by connecting your existing conferencing equipment

It can be challenging to collaborate across all of your locations when you are working with multiple conferencing systems that are unable to communicate with each other. OfficeSuite HD Meeting® Room Connector bridges the gap between your existing conferencing systems, including Cisco, LifeSize and Polycom, so you can seamlessly collaborate and meet face-to-face across your entire organization without replacing your existing equipment.

OfficeSuite HD Meeting Room Connector enables interoperability between multiple conferencing systems by allowing disparate H.323/SIP endpoints to join into a single online OfficeSuite HD Meeting session, eliminating the need for cumbersome cords and hook-ups within the conference room. Connect other devices such as desktops, mobile phones and tablets within the same meeting session to screen share digitally and allow remote employees to attend without traveling.

Provides a unified conferencing solution without the need to purchase new equipment

Features high definition video quality for all connected room systems

Ensures a consistent experience for all meeting participants regardless of device

Shares content wirelessly from your laptop or mobile device

Simplifies management through a single administrative website

Requires no costly on-premises equipment or maintenance; it is a 100% cloud-based platform

Reduces costs with licenses that can be shared across devices

OfficeSuite HD Meeting Room Connector works with most systems that support SIP or H.323 with H.264 video and G.722 or G.711 audio.
