

## DDOS MITIGATION SERVICE

# Powerful, affordable protection from network disruption and outages during DDoS attacks

Distributed Denial of Service (DDoS) attacks are becoming increasingly pervasive, malicious, complex and costly to address. They come in the form of multiple cyber-attacks that attempt to take down an online service, allowing attackers to wreak havoc and/or causing losses due to the inability of legitimate users or customers to access resources.

## DDoS Mitigation Service

As DDoS attacks become more prevalent, focused and severe, organizations need to consider new ways to proactively monitor and protect their infrastructure, applications and data.

### **Proactive monitoring, attack verification and notification**

DDoS Mitigations are integrated within our network to seamlessly protect your customers' Internet circuits seamlessly without customer involvement, ensuring critical business application traffic is not blocked.

### **Auto-mitigation rapid, real-time response against attacks**

Auto-mitigation adds an extra layer of defense by automatically blocking a well-known attack once detected by the monitoring system.

### **Access to DDoS Portal for real-time metrics and reports**

Customers receive real-time alerts and visibility into the potential attacks detected by the monitoring system. Comprehensive reports deconstruct the traffic type traversing your customers' networks, as well as active and past implemented mitigations.
