

SECURE REMOTE ACCESS

Private connectivity for remote workers

Providing secure access to company resources is essential in supporting business continuity and a work-from-home environment

7% Only around 7% of U.S. employees regularly worked from home before the COVID-19.¹

62% 62% of employed Americans currently say they are working from home during the crisis.²

29% 29% of organizations expect more than 50% of employees to continue teleworking after the pandemic.³

Secure Remote Access helps your organization:

Ensure an encrypted connection over the Internet

Control access to internal applications, systems and resources

Define which of your network and corporate resources are accessible to remote workers

Promotion:

Only 3 cents per day per tunnel

More than 50% off of the standard price

More affordable than ever

Available through March 31, 2021

Eligible services:

Secure Remote Access (SRA) for MPLS and SD-WAN with VeloCloud customers

SRA features:

Admins can create, update and delete remote access accounts in our award-winning portal, WE Connect.

Option to integrate with customer-owned Active Directory, TACACs or RADIUS

Sold in blocks of 5 remote access users—minimum of 1 block and no maximum limit

SRA tunnels may be shared across multiple end users

End users download VPN clients to connect securely to your corporate network

End users may connect from anywhere with Internet access
