

SD-WAN & CELLULAR BROADBAND

SD-WAN Free Resiliency

When you purchase Windstream Enterprise SD-WAN—and at least one access connection—you will receive 1 year free* of cellular broadband backup at every SD-WAN location.

SD-WAN

One of the key advantages of an SD-WAN solution is the ability to blend multiple access connections to optimize applications and maximize uptime with automated fail-over protection.

Windstream Enterprise will deploy the cellular broadband service in a backup mode. If your primary circuit were to fail, the 4G LTE circuit will kick in and critical applications can continue without interruption.

Windstream Enterprise Cellular Broadband with SD-WAN is a fully managed service. We will provide the LTE device and a 1GB per month data plan at each location. The data plan is pooled across all locations, providing data usage flexibility. You are only required to pay for overages, if they occur.

*Minimum 3-year term. SD-WAN must include one Windstream Enterprise access connection. You are responsible for payment of applicable taxes, surcharges and fees that apply to the services, including any charges or fees incurred as a result of exceeding your data plan. Subject to exclusions and the terms and conditions of your Windstream Enterprise Service Agreement.

Eligible services:

SD-WAN

Cellular Broadband (4G LTE)

Talk with your Windstream Enterprise representative for full details on how to qualify.
