

DIGITAL VOICE LINES

Increase productivity, control costs and optimize existing infrastructure

Digital Voice Lines provide a reliable, cost-effective alternative to legacy copper lines.

Digital Voice Lines (DVL) from Windstream Enterprise allow you to upgrade to VoIP technology to improve productivity and system management, while leveraging your existing analog phones and devices to maximize your infrastructure and control costs.

Support Critical Services

Leverage DVL with Cellular Failover to replace “plain old telephone service” (POTS) lines used for critical services such as fire alarms, security alarms, elevators, meters, sensors, etc.

Control Your Migration

Modernize your system and control costs by utilizing your existing analog phones and devices. Gain the new technology you need now, but make the move to IP devices whenever you choose.

Stay Current

Meet the changing demands of your business and always stay current—not in jeopardy of being ‘sun-setted’ or discontinued—with robust VoIP technology features and functionality.

Leverage One Provider

Eliminate the hassle of a multi-vendor environment by working with a single provider for all voice services across your locations, simplifying management and billing.

Windstream Enterprise offers two different DVL tiers based on your needs:

DVL Basic

Supports voice, E911, POS terminals and modem applications.

DVL with Cellular Failover

Additionally supports critical services such as alarm, elevator, vending machines, meters, sensors, etc.

Benefits/Features	DVL Basic	DVL with Cellular Failover
Analog signal, integrates with existing devices	✓	✓
Includes an Analog Telephone Adapter (ATA)	✓	✓
Supports voice, E911, POS terminals and modems	✓	✓
Supports critical services such as alarm, elevator, vending machines, meters, etc.	N/A	✓
Provides business continuity, even during network outages	N/A	✓
Battery backup*	Optional add-on	Optional add-on
Supports light to moderate faxing	✓	✓
Supports heavy faxing	N/A	N/A

* Customer may prefer to purchase elsewhere or may already have a generator or some other back-up power source within their building. Regardless, we strongly recommend an alternate back-up power source for the ATA (and other devices).

Add SD-WAN for up to 100% uptime and resiliency, in addition to application visibility and performance.

About Windstream Enterprise

Windstream Enterprise collaborates with businesses across the U.S. to drive digital transformation by delivering solutions that solve today's most complex networking and communication challenges.
