Transform your network and customer experience

Growth-oriented enterprises are struggling to deliver the personalized, secure, anytime, anywhere experience customers and employees expect. Traditional networks can't support advances in cloud and mobile applications. Companies have coped with this challenge by adding more MPLS bandwidth, or by combining MPLS with dedicated Internet access, cable and Ethernet—the results are costly and time-consuming to manage. SD-WAN is the ideal framework for a SASE (Secure Access Service Edge) solution.

The SD-WAN market is expected to surpass

4 billion by 2025.[1]

SD-WAN Concierge™

SD-WAN Concierge from Windstream Enterprise combines the intelligent, dynamic traffic routing of SD-WAN with consulting and professional services to help you create a customized hybrid WAN solution that utilizes the best available access options.

Application visibility and control
Centrally manage and deploy routing policies via the WE Connect portal

Dynamic WAN selection
Preserve application performance based on pre-set thresholds

Application optimization
Monitor and improve network paths for higher quality

Dynamic IPSec deployment
Enable end-to-end encryption for secure data transmission over public networks

Security
Ensure PCI DSS compliance with IPSec encryption and the ability to manage security policies

Managed service
Receive proactive solution monitoring and optimizing by technical service managers

Flexible connectivity
Unify disparate locations with any access and connect to leading cloud service providers with SD-WAN Cloud Connect

Dual active links
Increase resiliency with redundant and diverse connections at each location

How does SD-WAN Concierge deliver on your needs?

Optimize your network and costs

Converge voice, data and video applications

Deliver cloud-based apps with high performance

Augment MPLS connections with a second WAN, using any provider and access type

Use cost-effective and readily available access methods

Replace T1s with lower-cost, higher-bandwidth broadband

Reduce your per-Mbps cost by up to 90%

Manage your applications via WE Connect

Gain aggregated, network-wide visibility via an Insight Engine to identify anomalies and take corrective action

Leverage advanced reporting to customize reports and automate scheduling and email distribution

Use remote diagnostics for testing and troubleshooting

Stay connected anytime, anywhere with mobile access from smart devices

Instantly modify business and security policies with robust co-management configuration rights

View real-time performance by location, device and end user

Improve security

Comply with PCI DSS to protect data at rest and in transit

Create a virtual private network on top of existing connections

Encrypt all traffic with IPSec to secure any access type

Integrate security on edge device with MNS VNF

Choose from cloud- or premises-based security to support work from home and mobile employees

Why Windstream Enterprise?

OfficeSuite UC Concierge included when added to SD-WAN Concierge. LAN Services Concierge included when added to SD-WAN Concierge and OfficeSuite UC Concierge. White glove experience at no extra cost.

Leading SD-WAN provider
Windstream Enterprise is the leading SD-WAN service provider with thousands of customers.

Advanced technology platform
VMware, was named a leader in the Gartner Magic Quadrant for WAN Edge.[2]

White glove experience
Receive OfficeSuite UC® Concierge when purchased with SD-WAN Concierge. Include LAN Services Concierge when added to SD-WAN and OfficeSuite UC Concierge services.

Virtual Edge
Optimize connectivity to cloud service providers by bringing applications closer to end-users to reduce latency.

Cloud Core™ architecture
Get improved cloud-based application performance with diverse, low-latency connections to cloud providers—backed by our heritage as an Internet Service Provider.

Industry-leading security
Integrate next-generation firewalls and Unified Threat Management (UTM) via VNF, CPE or cloud.

Windstream Enterprise SD-WAN Community
Learn and collaborate via an online forum. Ask questions, share best practices with peers, find out about new enhancements and provide feedback. Join now.

Cloud-enabled connectivity, communications and security—guaranteed.
