

Expert management of your entire network

Remove the burden of managing and monitoring customer-owned access that connects to SD-WAN.

A 100% of companies surveyed have more than

50%

of their workloads and data in public cloud today.¹ This means that multiple access options to the cloud environment is critical to business needs.

Meet Customer Access Management

Windstream Enterprise has always delivered complete access management when providing third-party connectivity and is now extending that option when a customer brings their own access. If a connection goes down, we will receive an automatic notification and work directly with your carrier for resolution.

Customer Access Management (CAM) enables clients to focus their limited resources on innovations that drive successful business outcomes and exceptional customer experiences.

Managing third-party access vendors can be a time-consuming maintenance task for many organizations. Managing access issues is a task that leads to stress and burnout for IT teams that would be better focused on strategic innovations that move the business forward.

Remove the management burden by having Windstream Enterprise manage access for your entire SD-WAN.

- ✓ **24/7 coverage nationwide**
Get around-the-clock monitoring so issue resolution can start immediately.
- ✓ **End-to-end management**
Free your IT staff from the fire drills associated with a failed connection.
- ✓ **IT innovation**
Focus your IT resources on improving business operations versus routine maintenance.
- ✓ **Optimize performance**
Maximize network reliability and uptime with automated ticketing and resolution.
- ✓ **Single point of contact**
Depend on the experts at Windstream Enterprise as a trusted partner to fully manage your network infrastructure.

Cloud-enabled connectivity, communications and security—guaranteed.
